

Churn Model For Pilot Program

Our Employees at Risk Pilot Program

Identifying Talent Risks: Predictive analytics detect employees at risk of leaving, enabling proactive retention efforts.

Understanding Turnover Drivers: Data reveals key factors like leadership, workload, and career growth impacting attrition.

Enhancing Retention Strategies: Insights guide targeted programs to boost engagement and reduce voluntary turnover.

Supporting Metrics

What is Driving Churn

How Our Algorithm Works

Random Forest Model Insights: The model identified job satisfaction as the strongest predictor of employee retention.

Key Retention Factors: Employees with longer tenure, balanced workloads, moderate hours, and high performance evaluations are more likely to stay.

Unexpected Finding: Workplace accidents have minimal impact on retention decisions.

Strategic Implication: Improving job satisfaction should be a priority for data-driven retention strategies that enhance long-term employee engagement.

Where are People Leaving
